Preface

The global warming and low level of EMF pollution induces the enzyme heme oxygenase (HO1). HO1 converts heme to bilirubin and biliverdin. This leads to a heme deficiency state and stimulation of ALA synthase the rate limiting enzyme of porphyrin synthesis. The body metabolism gets channelled as a whole to porphyrin synthesis. The deficiency of heme results in cytochrome C oxidase dysfunction and mitochondrial dysfunction. Porphyrin photo-oxidation generated free radicals induce HIF alpha and glycolysis. This leads onto the accumulation of pyruvate which enters the GABA shunt pathway generating succinyl CoA and glycine, the substrates for porphyrin synthesis. The porphyrin arrays which can function as a supramolecular organism the self replicatory features. Porphyrin arrays can form templates on which other porphyrin arrays can form. Such self replicatory supramolecular porphyrin arrays can be called as porphyrions. The stress of global warming converts the body into a porphyrion colony or network. The porphyrins have got macroscopic wave particle existence. The porphyrins have also magnetic properties because of the iron centre. The porphyrin arrays can exist as quantal wave arrays as part of quantal form functioning as quantal computers capable of information storage and self replication. This could be a form of quantal life. The human consciousness depends upon three factors: perceptual synchronization, focused attention and working memory. Gravitational waves could form the basis of consciousness. Similarly, the human unconscious could be structured by anti-gravity. Porphyrions are extremophiles and can grow in extremes of temperature, space and hypergravity and antigravity situation. Actinides have a role in abiogenesis. This led to the plausibility of antigravity and hypergravity sensing brain porphyrions mediating consciousness and the unconscious brain. The porphyrions in the cerebellum can sense dark energy and dark matter just as it perceives gravity. This led to the possibility of exobiologic porphyrions which are paleospermic in origin contributing to the

evolution of life on earth including homo sapien brain. The gravitational and anti-gravitational waves or thought fields are structured in the brain by the reticular formation porphyrion network. The anti-gravitational waves can be thought of as the collective unconscious. The gravitational waves can thus function as a thought field or sub-quantal field on which the particles like neutrons, electrons, bosons, quarks, fermions can pop in and out from waves to particles. The thought field of gravity functions as the universal observer and brings the particulate world of matter into existence. Gravitational waves can form pressure waves which can create gravitational sounds. These thought sounds can undergo soni-luminescence creating photons and electromagnetic radiation the basis of the world of matter. Thus the thought field of gravity and the matter is unified. Thought conscious and unconscious underlies the world of matter. The porphyrions or supramolecular porphyrin arrays can exist as a wave quantal computer in the gravitational field with the graviton acting as logic gate and as the ubiquitous observer. The porphyrin arrays as wave forms exist as quantal superpositions and the graviton chooses one of the superpositions to macroscopic existence. The porphyrin supramolecular organism arises from the sea of gravitational waves which acts as the conscious mind and the graviton acting as the conscious observer. The global warming results in channelling of metabolism to porphyrin synthesis by induction of heme oxygenase activity. The human body gets converted into a colony of porphyrions which have a wave particle existence. The human body in its porphyrions incarnation especially in its wave form can disappear from existence. The human populations by this mechanism can get converted into a civilisation in the quantal world and live in multiple parallel universes for eternity. The quantal wave form of porphyrions by the mechanism of observation by gravitons of the conscious gravitational fields can come into macroscopic existence. The porphyrins can form a template on which isoprenoid organism, RNA viroids, DNA viroids and prions can form. They can self organise to form nanoarchaea and later eukaryotes, prokaryotes, multicellular organisms leading upto primates and humans. This forms the basis of the origin of

endosymbiotic actinide dependent cholesterol catabolizing archaea in humans. The human civilisation can arise from the nothingness of the quantal foam of gravitational waves mediating consciousness and disappear into nothingness.
